

1. Die-cut Tree parts from material of choice. Cut foliage twice. Foliage shape should be mirrored – cut printed material back to back or front to front. Pre-fit the foliage to the branches before moving onto the next step.

2. Attach glue dots or other adhesive to the branches of the tree on both sides.

3. Insert foliage pieces between the Tree branches until the top fits into the crease of the branches. Adhere the foliage to the branches.

4. Attach double-sided adhesive to both of the trunk tabs. Position the Tree so that the ends of the tabs meet the crease of the card. Close the card and firmly press to adhere the trunk tabs to the inside of the card.

5. Your Tree is ready!
