

658854 Sizzix® Thinlits™ Die Set 5PK - Flower, Calla Lily by Susan Tierney-Cockburn™

1. Die-cut flower in cream or a favorite color, leaves and calyx in dark green, stamen in bright yellow.

2. Shade the inside of the flower with bright green (for cream) or a shade darker than the color chosen with PanPastel®. Place flower on the molding pad and **shape** with the large ball stylus and loop tool, then place on the leaf pad and use the leaf tool to add some character **lines**.

3. Use the tweezers to carefully **bend** the edge of the flower all around. **Roll** the stem end of the flower, using a toothpick dipped in glue to secure the rolled shape.

4. To create the calyx: Place the calyx on the molding pad and **shape** using the leaf tool. Use the tweezers to **bend** in both sides. Use a toothpick to lightly spread a small amount of glue, then **roll** to meet and secure. Place the flower stem end into glue and set into the calyx.

5. **Shape** the stamen on the molding pad. To form the stamen, hold the narrow end with tweezers, place a small amount of glue on the open end and **roll**.

6. Apply a layer of glue to the outside of the stamen and dip in Woodland Scenics® Pollen. Apply glue and insert the stamen into the center of the flower as shown.

7. Place the leaves right-side down on the leaf pad, and use the leaf tool to add a **stem** line down the center. Turn over and bend the leaf in half, then add highlight along the stem line with PanPastel®. For the cream variety, you can add some white speckles to the leaves using a white pigment ink pen. **Pinch** and **bend** the leaf, then apply adhesive to the stem end and adhere beneath flower.
