

# 659257 Sizzix® Thinlits™ Die - Flower, Clematis by Susan Tierney-Cockburn

1. Die-cut petals from purple, scarlet, white, red or deep pink cardstock. Die-cut four to six leaves from medium green cardstock and calyx (one with six projections or two with four projections) from medium green cardstock. Die-cut the stamen from white or yellow cardstock.

2. Use PanPastel™ to add color to the petals as shown. Using the 3mm Ball Stylus, **cup** either the six-projection calyx or two of the four-projection calyxes. Note: When building an eight-petal Flower, glue and stack the two four-projection calyxes together with the projections offset.

3. Place petals on the Molding Pad and use the 3mm Loop Tool to **shape**. Use Leaf Tool and Leaf Pad to add character **lines**. Using tweezers, **pinch** the stem ends, then turn the petal right side down on the Molding Pad and use the 3mm Ball Stylus to add a **bend** to the tips of the petals.

4. Dip and drag each petal in glue. Assemble the Flower by first adhering the large petals to every other projection on the calyx, then fill in the remaining projections.

5. Using scissors, cut each projection of the stamen in half. Apply glue to the bottom edge of the stamen, grasp the small end with tweezers and **roll**. Fan out the stamen and lightly dip ends into glue, then into Woodland Scenics™ Pollen. Apply a small amount of glue to the center of the stamen and sprinkle with a deep red pollen. Dip bottom of stamen into the glue and adhere to the center of the Flower.

6. **Stem, vein, pinch and bend** leaves. Back fold leaves along the stem line and apply PanPastel Bright Green to the raised fold. Reverse the fold of the leaf so that highlighted stem line is the inner fold. Dip and drag stem in glue and place beneath the Flower.
