

1. Die-cut 8 petals from white, pink or red cardstock. Die-cut one calyx and four leaves from medium to bright green cardstock and one large and one small stamen from yellow cardstock.

2. Shade petals at the stem end with PanPastel® on the Non-stick Pad. **Shape** and **pinch**. **Bend** petals on the Molding Pad using the medium ball stylus.

3. **Stir** calyx on Molding Pad using the medium ball stylus. Transfer the calyx to the non-stick pad, dip stem ends of petals into glue and adhere three petals, alternating every other projection. Place the other three petals slightly closer to the center of the Flower to the center of the Flower between the first petals. Place in the Flower Pot to set.

4. With scissors, cut the fillaments of the large stamen in half. Use the small ball stylus on the Molding Pad to **stir** the large stamen. Use tweezers to **bend** the fillaments in toward the center.

5. Cut the fillaments of the small stamen. Use a toothpick to apply a small amount of glue along the bottom edge of the stamen and **roll**. Adhere the small stamen to the inside of the large stamen, then adhere both to the center of the Flower.

6. Using a toothpick, apply a small amount of glue to the tips of the stamen filaments. Sprinkle Woodland Scenics Pollen Yellow over the center of the Flower. Shake off excess.

7. Place leaves on the Leaf Pad, right-side down, and **stem**. Turn over and fold along the stem line. Apply highlight of PanPastel Bright Yellow Green down the stem line. Place back on the Leaf Pad, right side up, and **vein**. **Pinch** and **bend** leaf. Dip stem end into the glue and set in place under the Flower.
