

1. Die-cut from matboard. The 3D strips are designed to form the body of the project and require two identical shapes from another die.

2. Choose the 3D strip that best matches the chosen shape. Adhere the tabs of the appropriate strip to one of the sides. When assembling the box, folding the tabs inside will keep the outside flat for adhering sides or embellishments.

3. Adhere one of the scalloped pieces to the bottom (closed end) of the box.

4. Embellish as desired.

5. 3D Strips may be modified to accommodate smaller shapes.

6. Be creative and think outside of the box.
