

# 661931 Sizzix® Thinlits™ Die Set - Barrel Cactus, 3-D by Lynda Kanase

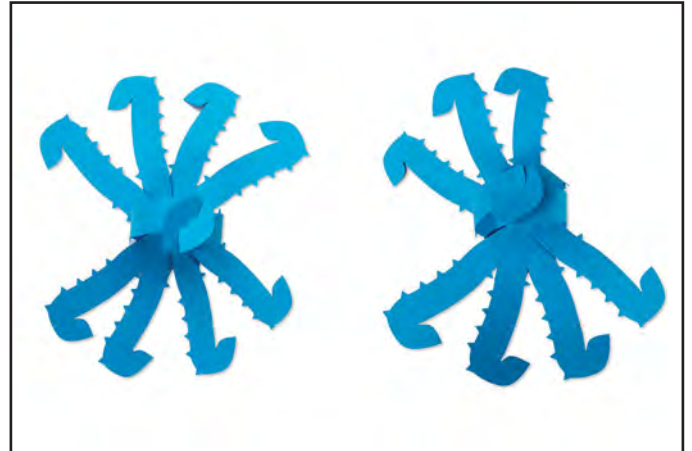

1. Die-cut ten side panels and two blossoms from desired material.

2. Form the top of the Barrel Cactus by inserting the notched tab of one side panel into the slit of another as shown. Continue to add all 10 panels in similar fashion.

3. Finish the top by inserting the notched tab of the last side panel into the slit of the first.

4. Flip the project over to create the bottom. Connect two opposing side panels by hooking the notched ends together. Continue to connect side panels one by one until all sides are connected in the center.

5. The image on the left is the finished bottom of the Barrel Cactus. Flip the project over, and embellish the top with blossoms if desired.
