

1. Die-cut out of desired material. Apply adhesive to the connector tabs.

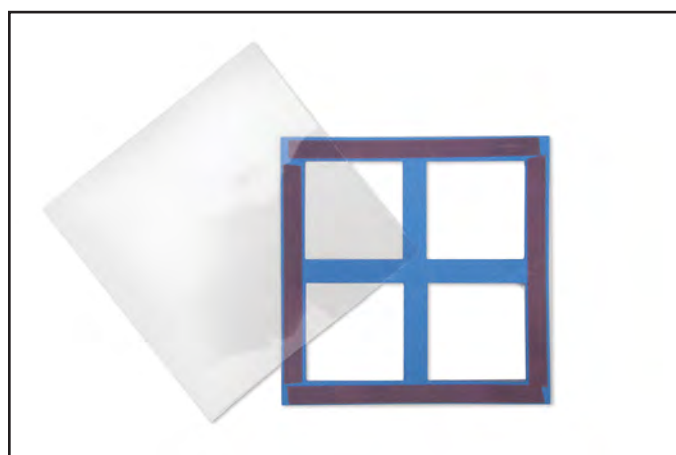

2. Adhere the two sides together using the connector tabs.

3. The finished pocket is shown above.

4. Cut two windows in the shaker window with one pass through the Sizzix® machine. Reposition the die, and run the window through a second time to create four windows.

5. Adhere acetate to the back of the window.

6. Apply adhesive foam tape to the back side of the window so that it completely borders the cutouts. Place confetti inside of the window sections, and seal using a piece of cardstock.

7. Adhere the shaker window to the pocket, and embellish as desired.
