

1. Use the single-fold technique for a page spread by first folding a sheet of paper large enough to accommodate the die.

2. Align the base edge of the die so that it barely hangs over the folded edge of the paper. Place a second Cutting Pad over the top of the paper and die, and run the "sandwich" through the Sizzix® machine using the appropriate platform configuration.

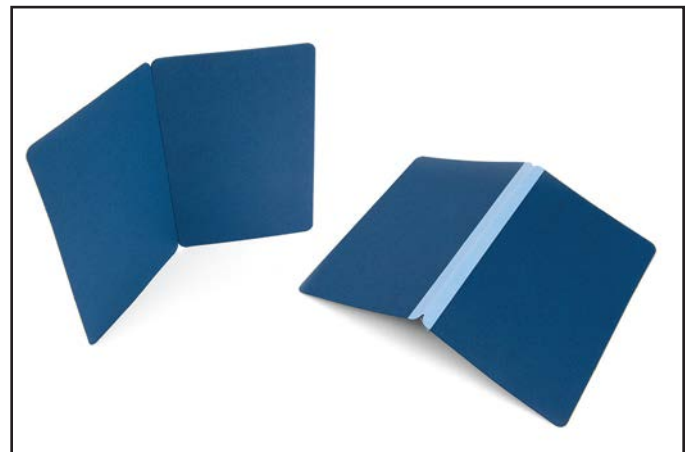

3. The single-fold technique creates a single two-page spread as shown.

4. The die may also be used to create single sheets, which can be used individually or connected to each other by using the provided spine die.

5. The above image shows how to align and adhere two single sheets to the spine to create a two-page spread.

6. Embellish as desired.
