

1. Fold-its dies are designed to be cut using the single-fold technique. This technique begins by folding a single piece of cardstock in half.

2. Place the folded cardstock on the Cutting Pad.

3. For a card base that hinges at the top, position the die with the cutting edge of two of the points just past the edge of the fold. The words "Place fold here" are embossed into the die on the corresponding points.

4. For a card base that hinges on the side, position the die with the cutting edge of a single point just past the edge of the fold. The words "Place fold here" are embossed into the die on the corresponding point.

5. Place a Cutting Pad on top of the die and roll through a Sizzix® machine, using the appropriate platforms and shims for the machine. Embellish as desired.
