

663178 Sizzix® Thinlits™ Die Set - Bow, 3-D by Lynda Kanase

1. Die-cut either segmented or plain ribbons out of desired material.

2. A standard bow will require five large, four small and one center ribbon. You will also need a small brad or adhesive.

3. Start by looping the center ribbon with the holes overlapping, and insert the brad from the inside of the loop. The remaining ribbons are not inverted loops. They are created by putting the two holes at each end on top of each other with the front of each hole facing up. Insert the brad into the front of each of the ribbons.

4. The image shows the ribbon after the center ribbon and the four small ribbons have been threaded onto the brad.

5. The five remaining ribbons are threaded onto the brad to complete the bow.
